

Terms of Purchase and Use

n8n M-Pesa Mastery

Terms of Purchase and Use : n8n M-Pesa Mastery

Last updated: 2026-10-03

These terms govern the purchase and use of **n8n M-Pesa Mastery**, including related videos, PDFs, workflow files, templates, private repository access, and supporting materials.

This is an operational terms template for the course business and should be reviewed and adapted for your exact legal setup before public launch.

1. What you are buying

Depending on the tier purchased, buyers may receive access to some or all of the following:

- video lessons
- PDF documentation
- student onboarding docs
- workflow JSON files
- Postman collection
- SQL schema files
- deployment starter files
- private GitHub repository access
- premium or agency-oriented support materials

The exact deliverables for each tier are defined on the checkout page at the time of purchase.

2. License scope

Code and workflow artifacts

Unless otherwise stated, code artifacts and workflow JSON files are provided under the code license included with the product.

Course content

Videos, PDFs, lesson structure, diagrams, and written educational content remain the intellectual property of the course creator unless otherwise stated.

Buying the course gives you a license to use the material as allowed by the offer you purchased. It does not transfer ownership of the course content itself.

3. Personal use and internal team use

Unless a tier explicitly allows broader use:

- do not resell the course itself
- do not repost private repo contents publicly
- do not share paid files with non-buyers
- do not share your private repo invite or access with third parties

If you are buying on behalf of a team, use a tier that allows the intended number of seats or team members.

4. Private repository access

If your purchase includes private repository access:

- access is granted only after purchase verification
- access may be tied to a GitHub username
- access may be revoked after a refund, chargeback, or policy violation
- seat limits may apply depending on tier

Unauthorized sharing of private repo contents may lead to access removal without further updates being provided.

5. Refunds

Refunds are governed by the current published refund policy.

Please see:

- `refund-policy.md`
- or the public refund policy PDF / landing-page version you publish

If a refund is approved, related access may be revoked.

6. Support

Support is governed by the current support policy and the scope promised at checkout.

See:

- `support-policy.md`

Not all purchases include one-on-one implementation help.

7. No guarantee of specific business results

The course is designed to help learners build production-ready STK Push payment workflows, but we do not guarantee:

- a specific income outcome
- client wins
- job placement
- regulatory approval
- Safaricom production approval for your business
- success on infrastructure or systems outside the documented course path

Your results depend on your execution, environment, business context, and external platforms.

8. Technical responsibility

You are responsible for:

- testing workflows in sandbox before production
- protecting your own credentials and tokens
- validating changes before using them in a live business setting
- complying with the laws and payment rules that apply to your use case

This is especially important for payments, callbacks, and production deployment.

9. Acceptable use

You may not use the course platform, community, or access workflows to:

- abuse support channels
- attempt fraudulent refunds or chargebacks
- scrape or mirror private course materials for redistribution
- share or sell access you did not have permission to share
- harass the creator or other learners

Access may be suspended or revoked for serious misuse.

10. Platform dependency

This product may rely in part on third-party services, such as:

- GitHub
- Gumroad or another checkout provider
- Docker
- Safaricom Daraja sandbox / production APIs
- email or community tools

Availability of those services is outside the direct control of the course creator.

11. Changes and updates

The course and its supporting assets may be updated over time.

The type and frequency of updates may depend on:

- API changes
- bug fixes
- documentation improvements
- your purchased tier
- ongoing product direction

Unless explicitly promised, buying once does not guarantee lifetime one-on-one support.

12. Limitation of liability

To the maximum extent allowed by law, the course creator is not liable for indirect, incidental, or consequential losses arising from:

- how you use the materials
- production deployment mistakes
- misuse of payment credentials
- downtime or third-party platform failures
- modifications you make to the workflows or examples

Always test in sandbox first and validate before using any payment flow in production.

13. Governing law and disputes

Add the governing law and dispute-resolution language that fits your business location and legal setup before launch.

Placeholder example:

- Governing law: Kenya
 - Venue / dispute path: courts or agreed dispute-resolution process in Kenya
-

14. Contact
